

Joining the Virginia Tech GitHub Organization

Membership instructions

The [Virginia Tech GitHub organization](#) uses an invitation process. Request membership, verify your VT email, and accept the invitation sent to the email associated with your GitHub account.

Before you begin

Membership is available to current and former VT students, faculty, and staff, including alumni. Have your GitHub username ready and confirm that you can receive email at your VT PID address. VT sends verification messages only to @vt.edu addresses. See the [VT joining requirements](#) and [membership FAQ](#).

Joining steps

1. **Open the membership request page.** Visit the [VT Join Organization page](#). Use the GitHub account that you want to become a member.
2. **Complete the form and select Join.** Enter your VT PID, the part of your email address before @vt.edu. The form already displays the @vt.edu suffix. Enter your GitHub username in the other field and submit the request.
3. **Verify your VT email.** Check your @vt.edu inbox for the verification message and follow its instructions. Check your spam or junk folder if the message does not appear.
4. **Look for the GitHub invitation.** After verification, VT says it will send an invitation to the email address associated with your GitHub account. This may be a different inbox from your VT email. The [VT membership FAQ](#) describes these two email steps.
5. **Accept the invitation.** Follow the invitation link while signed into the intended GitHub account and accept it. GitHub invitations expire after seven days. If the organization requires two-factor authentication, enable it before accepting. See [GitHub invitation documentation](#).

Support

If the form fails or the emails do not arrive, check your spam or junk folders, then contact github-g@vt.edu. You can also contact the coordinators if you qualify for membership but no longer have access to your VT email. Their address appears on the [VT contact information page](#).
